

Carbon Reduction Plan

Supplier name: Reworks London

Publication date: April 2025

Commitment to achieving Net Zero

Reworks London is committed to achieving Net Zero emissions by 2045.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024 (01/01/24 – 31/12/24)

Additional Details relating to the Baseline Emissions calculations.

This submission represents **Reworks London's first baseline year** for carbon reporting. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in line with the Corporate Value Chain (Scope 3) Accounting and Reporting Standard².

We have not procured any energy resources for our facility, as all energy provisions are leased and fall under the responsibility of the landlord. Scope 2 emissions are therefore based on the building emission rate provided in the Energy Performance Certificate (EPC) rating for our office space, which remains valid until June 11, 2029.

Environmental Scope 3 Categories

In line with the GHG Protocol guidelines, Reworks London's business activities in this baseline year include the following relevant Scope 3 categories:

- Category 1: Upstream transportation and distribution.
- Category 5: Waste generated in operations.
- Category 6: Business travel.
- Category 7: Employee commuting.

Baseline & Current Emissions Reporting

Baseline year emissions: 2024 (01/01/24 – 31/12/24)	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	0.373
Scope 2	5.35
Scope 3 (Included Sources)	Scope 3 Total: 214.01
	1. Purchased goods and services = 211.59
	5. Waste generated in operations = 0.16
	6. Business travel: 1.778
	7. Employee commuting = 0.49
Total Emissions	219.73

Emissions reduction targets

Reworks London has initiated its carbon tracking approach by formally establishing its baseline year to 2024. This change reflects improved data accuracy and serves as the benchmark for measuring our future emissions reductions.

We have adopted the following carbon reduction targets. Reworks London aims to achieve NetZero by 2045 and will put interim targets in place to ensure sufficient progress. We have adopted the following carbon reduction targets:

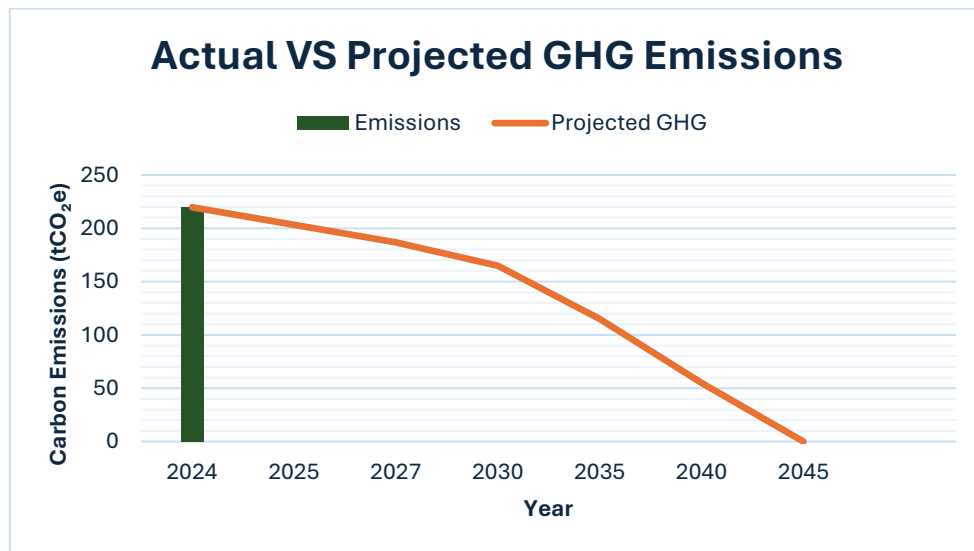

- We commit to reducing absolute Scope 1 and Scope 2 greenhouse gas (GHG) emissions by 2035.
- We project that GHG emissions will decrease to 115 tCO₂e by 2035.

(1) <https://ghgprotocol.org/corporate-standard>

(2) <https://ghgprotocol.org/standards/scope-3-standard>

(3) <https://www.gov.uk/government/collections/government-conversion-factors-for-company-reporting>

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

With the start of our environmental journey, new proposals and strategies have been incorporated into our efforts during the year 2024, We are actively engaged in the ongoing development and implementation of additional measures that will be in effect when performing the contract.

The following environmental management measures and projects have been completed or implemented within Reworks London since 2024:

- Operational updates such as LED light fittings in all our UK office spaces.
- Enrolment in the Cycle to Work Scheme for our employees.
- Continued engagement of our employees through Carbon Reduction Educational Awareness training programmes.
- Implementation of enhanced GHG tracking protocols through monthly and quarterly monitoring.

Future Carbon Reduction Initiatives

In the future we hope to implement further measures such as:

- Developing a comprehensive low-carbon transportation strategy (incorporating electric vehicles, route optimisation, and shipment consolidation).
- Acquiring a new logistic hub built to eco-design standards and integrated with Net Zero technologies.
- Launching a carbon offset program to address emissions that remain unavoidable through direct reduction measures.
- Implementing the ISO 14001 Environmental Management System certification
- Implementing the ISO 50001 Energy Management System to drive further energy efficiencies.
- Integrating enhanced social value and governance measures into our operations, including setting interim emissions targets—reducing absolute Scope 1 and 2 emissions by 2035.
- Enhanced tracking of specific category 1 purchases and their associated emission factor.
- Annual GHG Emissions Report, highlighting our commitment to reducing our carbon footprint and sustainable business practices.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting (3).

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard. (2)

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
